Subject: Liquid Natural Gas terminal proposed for Bradwood, Oregon by
Bradwood Landing, LLC/NorthernStar, LLC

Greetings Ladies,

While doing research for the above project, I discovered the West Coast Governors' Agreement on Ocean Health and became very excited to see what An absolutely wonderful thing you all have accomplished. Congratulations!

The reason I am writing is to see if Washington and Portland Audubon Societies may request and receive support from the West Coast Governors' Agreement to hopefully eliminate completely or seriously curtail installation of LNG terminals along our West Coast. California has successfully halted two terminals, one in Long Beach and the other off the coast near Malibu.

NorthernStar, LLC, the parent company to Bradwood Landing, LLC (BL) is Proposing to build a terminal at Bradwood, Oregon. NorthernStar, LLC is the same Company that has proposed to restructure the old oil platform into an off-shore LNG terminal, near Santa Barbara, California.

I am enclosing several attachments, but will try to give you as succinct info as possible.

- 1) My letter from Willapa Hills Audubon, which is in draft form as I am awaiting information back from Portland Audubon, will give you the general gist of our argument.
- 2) A Resolution from the Executive Director of Audubon Washington and the Washington State Audubon Conservation Committee to Federal Energy Regulatory Commission (FERC), dated April 13, 2007, with cover letter.
- 3) Press Release dated today, June 27, 2007 stating "The staff report recommends the Planning Commission deny Bradwood Landing's application based on facility size, road access, public safety, fish habitat and decommissioning issues." <http://www.co.clatsop.or.us/index.asp>

We can submit email comments up until Friday, June 29, 2007, 5:00, please see 2nd to last paragraph of Clatsop website for specifics. I realize there is not a lot of time before Friday, so maybe one of us could present any comments for

you, at the July 10th public hearing. I did try to clarify how many copies, but still find their instructions a bit confusing. They have to be exhausted.

4) The Oregon Department of Land Conservation and Development Form 1 Notice of Proposed Amendment, (the so called 45 day notice) which states what and how Bradwood Landing, LLC is requesting regarding Comprehensive Plan Text and Map Amendments, Zoning Map Amendment, etc.

I found their following statement particularly presumptive "take exception to Goal 16" which, in essence states "Oregon will protect and where possible restore our estuaries and wetlands." This document has a color photo of where in the estuary they are planning to place the berth and the turning basin, which will require dredging in the estuary.

IMPORTANT FACT: Bradwood, Oregon is part of the Coastal Zone, and therefore is covered under the Coastal Zone Management Act. Although FERC has the overall authority to determine where LNG terminals will be built, states still have authority with regards to the Coastal Zone Management Act, the Clean Water Act, and the Clean Air Act.

5) Color Map attached to this document clearly shows Bradwood as part of the Coastal Zone Boundary. ("Leahy signature", the Leahy's are the current owners who have given BL an option to lease the property.

6) "Protest of Clatsop County, Oregon Pursuant to Rule 211", FERC document 20060706-5063. The pertinent pages are from 6 through 10, which gives quite a detailed list of all the things that are wrong with this proposed development.

I know this will be a lot to digest, so should any of you need further clarification, please email or contact me. Either Duncan, my husband, who has also done extensive research on the emissions and economic aspects, or I will be able to help.

Two other invaluable sources of information, who have been working with Willapa Hills Audubon:

George Exum geo@wwestsky.net

Dan Serres dserres@oregonwaters.org

Many thanks for any and all help that can be given.

Warm regards,

Gloria G. MacKenzie for
Willapa Audubon Society
